

What is claimed is:

1. A toy top game unit comprising a toy top, driving means for rotating said toy top, a game board for receiving said toy top thereon, and means for interacting the toy top and the game board, and for imparting a change to an operational mode of the toy top on said game board,

5 said interacting means including first magnet means arranged on the toy top and second magnet means arranged on the game board.

10 2. The game unit according to claim 1, wherein the game board comprises a base board having an upper surface thereof and a game board mounted on the upper surface of the base board, said upper surface of said base board being provided with a receiving means for receiving said second magnet means therein, said game board being detachably mounted on said upper surface of said base board.

15 3. The game board according to claim 2, wherein at least a portion of said game board covering said upper surface of said base board is made transparent.

20 4. The game unit according to claim 1, wherein
(a) the driving means is provided with a spin imparting means to impart a spinning force to the toy top, a locking means to lock the spin imparting means and a rack belt, the spin imparting means is operated by linking it with a pulling-out operation of said rack belt inserted into the driving means, and when the rack belt is pulled out from the driving means, the locking means starts and the spin imparting means immediately stops; and

25 (b) the toy top is provided with a linking portion to link the toy top with the spin imparting means, and the toy top, which spins by linking it with the operation of the spin imparting means, spins by inertia after the stopping of the spin imparting means and a linkage with the spin imparting means is disengaged.

30 5. A game board for playing a toy top game using a toy top having a magnet arranged on said toy top comprising:

a base board having an upper surface, and

a game board mounted on said upper surface of said base board,
said upper surface of said base board being provided with a
receiving means for receiving magnet means therein, said game board
being detachably mounted on said upper surface of said base board.

5 6. The game board according to claim 5, wherein at least a
portion of said game board covering said upper surface of said base
board is made transparent.

7. A toy top having a rotational axis thereof comprising:
a toy body having a shaft arranged at a lowermost portion of
10 said toy body and a mount support means for supporting a plurality
of blade members thereon;
said blade members being laid to overlap each other and being
detachably mounted through said mount support means; and
magnet means being arranged on the rotational axis of said
15 toy top.
